COURSE DESCRIPTION

The increasing complexity and specialization of media has created a need for new talent that understands and can use sophisticated online technologies. On the other side, media organizations rarely provide time or money for existing employees to learn new skills.

This course will enable students to become fearless learners of new technologies in today's knowledge economy, and teach them to be comfortable working in contemporary multimedia organizations.

This course will introduce students to the terminology and tools used in multimedia environments, and will allow students to actively use the new skills in a series of discussions and labs.

At the conclusion of the course, students should be able to:

- Describe how the web and social media works and use relevant terminology correctly.
- Complete basic online content creation activities using standard services and software common in the media professions.
- Use Social Media technologies for streamlined workflow and accelerated development of knowledge networks.
- Create, compress, transfer and link appropriately to files in a variety of formats, including photos, audio, and video.
- Take an active role in learning and discovery.

Learning will take place in a 100% online environment. Online lectures will be a mix of readings, discussions, and exercises. All lectures, office hours and other materials will be available exclusively online.
